

# THE MIRACLE OF MOUNT QUICK TISSUE SECTION TRANSFER

## THE SITUATION:

Your Pathologist has informed you that additional immuno tests are required on a section of tissue that only exists on a single slide.

## YOUR ASSIGNMENT:

To make a miracle happen and somehow come up with additional tissue that can be put on new slides for the requested immuno tests.

## YOUR SOLUTION:

Mount-Quick is used to embed the tissue section, allow dividing into multiple pieces and transfer the new sections to separate slides.

Every lab should have this stashed in the drawer...even if you only need it for when a slide breaks. It's a must for every histologist's tool box!

P.S. You don't have to tell your pathologist you have it.
