Steiner-Steiner Modified Silver Stain Kit - Technical Memo

KIT INCLUDES:
Solution A: Uranyl Nitrate 1%, Aqueous 250 ml
Solution B: Silver Nitrate 1%, Aqueous 250 ml
Solution C: Gum Mastic 2.5%, Alcoholic 175 ml x 2
Ingredient D: Hydroquinone, Powder 5 grams
Mini Sampling Spoon

COMPLIMENTARY POSITIVE CONTROL SLIDES: Enclosed are two complimentary unstained positive control slides for the initial verification of staining techniques and reagents. Verification must be documented by running one Newcomer Supply complimentary positive control slide along with your current positive control slide for the first run. Retain the second complimentary control slide for further troubleshooting, if needed.

Additionaly Needed:
Hydrochloric Acid 5%, Aqueous Part 12086 (for acid cleaning glassware)
Xylene, ACS Part 1445
Alcohol, Ethyl Denatured, 100% Part 10841
Alcohol, Ethyl Denatured, 95% Part 10842
Coplin Jar, Plastic Part 5184 (for microwave modifications)

APPLICATION:
Newcomer Supply Steiner-Steiner Modified Silver Stain Kit procedure, with included microwave modifications, is a silver technique effective for the demonstration of spirochetes, Helicobacter pylori, Legionella pneumophilia, other nonfilamentous bacteria and fungus.

METHOD:
Fixation: Formalin 10%, Phosphate Buffered (Part 1090)
Technique: Paraffin sections cut at 4 microns
Solutions: All solutions are manufactured by Newcomer Supply, Inc.

Newcomer Supply Stain Kits are designed to be used with Coplin jars filled to 40 ml following the provided staining procedure. Some solutions in the kit may contain extra volumes.

PRESTAINING PREPARATION:
1. If necessary, heat dry tissue sections/slide in oven.
2. All glassware/plasticware must be acid cleaned prior to use.
   a. See Procedure Notes #1 and #2 (page 2).
4. Preheat Solution B: Silver Nitrate 1%, Aqueous to 60°C in a water bath. Save for Step #11.
5. Prepare Hydroquinone Solution; combine and mix well.
   a. Ingredient D: Hydroquinone, Powder 0.5 gm (or one rounded scoop with reusable mini sampling spoon)
   b. Distilled Water 25 ml
6. Prepare fresh Reducing Solution by combining in order listed.
   a. Hydroquinone Solution (Step #5) 25 ml
   b. Solution C: Gum Mastic 2.5%, Alcoholic 15 ml
   c. Solution B: Silver Nitrate 1%, Aqueous 0.6 ml
   d. Solution will turn milky white after addition of Gum Mastic.
   e. Preheat solution in 45°C water bath. Save for Step #15.
7. Do not preheat solutions if using Microwave Modifications.

STAINING PROCEDURE:
8. Deparaffinize sections thoroughly in three changes of xylene, 3 minutes each. Hydrate through two changes each of 100% and 95% ethyl alcohols, 10 dips each. Wash well with distilled water.
   a. See Procedure Note #3 (page 2)
9. Sensitize in preheated Solution A: Uranyl Nitrate 1%, Aqueous (Step #3) for 10 minutes in a 60°C water bath.

Microwave Modification: See Procedure Note #4 (page 2).
   a. Place slides in a plastic Coplin jar with Solution A: Uranyl Nitrate 1%, Aqueous. Microwave at 70°C for 1 minute.
10. Rinse well in several changes of distilled water.
11. Place slides in preheated Solution B: Silver Nitrate 1%, Aqueous (Step #4) and incubate in a 60°C water bath for 15 minutes.

Microwave Modification:
   a. Place slides in a plastic Coplin jar with Solution B: Silver Nitrate 1%, Aqueous. Microwave at 70°C for 1 minute.
   b. Remove from microwave, cover and let sit for 1 minute.
12. Rinse well in several changes of distilled water.
   a. Excessive rinsing may cause nucleus to pick up silver.
13. Dip 5 times in two changes each of 95% and 100% ethyl alcohols.
14. Place in Solution C: Gum Mastic 2.5%, Alcoholic for 3 minutes.
15. Place slides in preheated Reducing Solution (Step #6) in 45°C water bath for 10-30 minutes with frequent agitation. Examine microscopically after 10 minutes of incubation.
   a. Check microscopically by dipping slide in 100% alcohol.
   b. Review for desired staining results.
   c. If necessary, return to warm solution; check every 2-5 minutes until desired results are achieved.

Microwave Modification:
   a. Place slides in a plastic Coplin jar with Reducing Solution. Microwave at 70°C for 1 minute. Remove from microwave.
   b. Pipette solution twice with plastic pipette to evenly distribute heated solution.
   c. Cover and let sit for 1 minute.
   d. Check microscopically by dipping slide in 100% alcohol.
   e. Review for desired staining results.
   f. If necessary, return to warm solution, check every 1 minute until desired results are achieved.
16. Directly dehydrate in two changes of 100% ethyl alcohol. Clear in three changes of xylene, 10 dips each; coverslip with compatible mounting medium.

RESULTS:
Spirochetes | Dark brown to black
Helicobacter pylori | Dark brown to black
Legionella pneumophilia | Dark brown to black
Nonfilamentous bacteria and fungus | Dark brown to black
Background | Golden brown

SUPPORT/WARRANTY: For assistance regarding this product contact Newcomer Supply at 800-383-7799 or info@newcomersupply.com. The information presented in this technical memo is to the best of our knowledge accurate. No warranty is expressed or implied. PROCEDURE NOTES:

1. Acid clean all glassware/plasticware (12086) and rinse thoroughly in several changes of distilled water.
2. Plastic (5500), plastic-tipped or paraffin coated metal forceps must be used with any silver solution to prevent precipitation of silver salts. No metals of any kind should be in contact with any silver solution. Only glass thermometers should be used.
3. Drain slides after each step to prevent solution carry over.
4. The suggested microwave procedure has been tested at Newcomer Supply. This procedure is a guideline and techniques should be developed for your laboratory.
5. If using a xylene substitute, follow manufacturer’s recommendation for deparaffinization and clearing steps.
