

Part 4660 Revised January 2025

Spirochete, Animal Control Slides - Technical Memo

CONTROL SLIDES: Part 4660A Part 4660B 10 Slide/Set 98 Slide/Set

PRODUCT SPECIFICATIONS:

Tissue: Positive staining animal organ.

Fixation: Formalin 10%, Phosphate Buffered (Part 1090).

Section/Glass: Paraffin sections cut at 4 microns on Superfrost™ Plus slides.

Quality Control Stain: Steiner-Steiner Modified quality control stained slide(s) included.

Reactivity: Guaranteed product specific reactivity for one year from date of receipt. Revalidate after one year to verify continued reactivity.

Storage: 15-30°C in a light deprived and humidity controlled environment. **Intended Use:** To verify histological techniques and reagent reactivity.

Before using unstained control slides, review the enclosed stained slide(s) to ensure that this tissue source is acceptable for testing needs.

CONTROL SLIDE VALIDATION:

With Steiner-Steiner Modified Silver Stain Kit:	Part 9171A	Individual Stain Solution
Solution A: Uranyl Nitrate 1%, Aqueous	250 ml	Part 14036
Solution B: Silver Nitrate 1%, Aqueous	250 ml	Part 13804
Solution C: Gum Mastic 2.5%, Alcoholic	350 ml	Part 1145
Ingredient D: Hydroquinone, Powder	5 grams	Part 12089

APPLICATION:

Newcomer Supply Spirochete, Animal Control Slides are for the positive histochemical staining of spirochetes, the causative agent of a variety of diseases such as; syphilis, bejel, pinta, yaws and lyme.

PRESTAINING PREPARATION:

- 1. Heat dry sections in oven according to your laboratory protocol.
- 2. All glassware/plasticware must be acid cleaned prior to use.
 - a. See Procedure Notes #1 and #2 (page 2).
- Preheat Solution A: Uranyl Nitrate 1%, Aqueous to 60°C in a water bath. Save for Step #9.
- Preheat Solution B: Silver Nitrate 1%, Aqueous to 60°C in a water bath. Save for Step #11.
- 5. Prepare Hydroquinone Solution; combine and mix well.
 - a. Ingredient D: Hydroquinone, Powder 0.5 gm (or one rounded scoop with reusable mini sampling spoon)
 b. Distilled Water 25 ml
- 6. Prepare fresh Reducing Solution by combining in order listed.
 - Hydroquinone Solution (Step #5) 25 i
 - o. Solution C: Gum Mastic 2.5%, Alcoholic 15 ml
 - c. Solution B: Silver Nitrate 1%, Aqueous 0.6 ml
 - d. Solution will turn milky white after addition of Gum Mastic.
 - e. Preheat solution in 45°C water bath. Save for Step #15.
- 7. Do not preheat solutions if using Microwave Modifications.

STAINING PROCEDURE:

- Deparaffinize sections thoroughly in three changes of xylene, 3 minutes each. Hydrate through two changes each of 100% and 95% ethyl alcohols, 10 dips each. Wash well with distilled water.
 - a. See Procedure Note #3 (page 2)
- 9. Sensitize in preheated Solution A: Uranyl Nitrate 1%, Aqueous (Step #3) for 10 minutes in a 60°C water bath.

Microwave Modification: See Procedure Note #4 (page 2)

- a. Place slides in a <u>plastic</u> Coplin jar with Solution A: Uranyl Nitrate 1%, Aqueous. Microwave for 1 minute at 70°C.
- 10. Rinse well in several changes of distilled water.
- 11. Place slides in preheated Solution B: Silver Nitrate 1%, Aqueous (Step #4) and incubate in a 60°C water bath for 15 minutes.

Microwave Modification:

- Place slides in a <u>plastic</u> Coplin jar with Solution B: Silver Nitrate 1%, Aqueous. Microwave for 1 minute at 70°C.
- b. Remove from microwave, cover and let sit for 1 minute.
- 12. Rinse well in several changes of distilled water.
 - a. Excessive rinsing may cause nuclei to pick up silver.

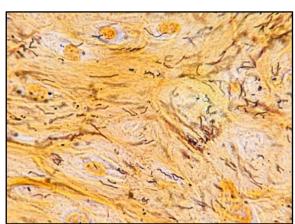

- 13. Dip 5 times in two changes of fresh 95% and 100% ethyl alcohols.
- 14. Place in Solution C: Gum Mastic 2.5%, Alcoholic for 3 minutes.
- Place slides in preheated Reducing Solution (Step #6) in 45°C water bath for 10-30 minutes with frequent agitation. Examine microscopically after 10 minutes of incubation.
 - a. Check microscopically by dipping slide in 100% alcohol.
 - Review for desired staining results.
 - If necessary, return to warm solution; check every 2-5 minutes until desired result is achieved.

Microwave Modification:

- Place slides in a <u>plastic</u> Coplin jar with Reducing Solution. Microwave for 1 minute at 70°C. Remove from microwave.
- Pipette solution twice with plastic pipette to evenly distribute heated solution.
- c. Cover and let sit for 1 minute.
- d. Check microscopically by dipping slide in 100% alcohol.
- e. Review for desired staining results.
- If necessary, return to warm solution, check every 1 minute until desired results are achieved.
- Directly dehydrate in two changes of 100% ethyl alcohol. Clear in three changes of xylene, 10 dips each; coverslip with compatible mounting medium.

RESULTS:

Spirochetes Dark brown to black Background Golden brown

1020 Prairie View Court • Waunakee, WI 53597-8512 • 800-383-7799 • www.newcomersupply.com • info@newcomersupply.com

PROCEDURE NOTES:

- Acid clean all glassware/plasticware (12086) and rinse thoroughly in several changes of distilled water.
- No metals of any kind should come in contact with silver solutions to prevent precipitation of silver salts. Use plastic forceps (5500) or paraffin coated metal forceps.
- 3. Drain slides after each step to prevent solution carry over.
- The microwave procedure was tested using a laboratory-grade microwave oven. This procedure is a guideline and techniques should be developed for use in your laboratory.
- If using a xylene substitute, follow manufacturer's recommendation for deparaffinization and clearing steps.
